

READING CAN SAVE THE PLANET by

Shawnella Bautista

3rd Grade, Ms. Patubo

Astumbo Elementary School

Reading can save the planet by learning how to protect the environment, like how to throw the trash properly. By reading we can also learn about the animals, especially the endangered animals, and how to save them. We also learn about the trees on how to take care and protect them from the people cutting the trees and some bugs that ruin the trees. Reading can also save the planet by sharing information about the different people and different nations around the world, so everybody can be aware of what's happening to our environment, to help everybody protect and avoid so not to lose or prevent the disappearance of our natural resources. We can read about our waters and oceans. People should stop collecting coral for the reefs and stop dumping trash into the oceans. Reading also helps people know not to fish for turtles, whales, and sharks. Reading also helps us protect the water we drink, by letting us know what to do with our old cars and where we can throw them. Reading helps us become smart and good persons, and reading is power.
